## Options

Available options to `config.toml` or `hugo.toml`:

```
[services]
[services.disqus]
shortname = 'YOUR_DISQUS_SHORTNAME'      # use disqus comments

[params]
# color style
color = 'linen'                           # linen, wheat, gray, light

# header social icons
twitter = 'YOUR_TWITTER_ID'               # twitter.com/YOUR_TWITTER_ID
github = 'YOUR_GITHUB_ID'                 # github.com/YOUR_GITHUB_ID
instagram = 'YOUR_INSTAGRAM_ID'          # instagram.com/YOUR_INSTAGRAM_ID
linkedin = 'YOUR_LINKEDIN_ID'             # linkedin.com/in/YOUR_LINKEDIN_ID
mastodon = 'YOUR_MASTODON_LINK'           # e.g.
'https://mastodon.instance/@xxx'          # threads.net/@YOUR_THREADS_ID
threads = '@YOUR_THREADS_ID'              # show rss icon
rss = true
```

```

# home page profile
avatar = 'GRAVATAR_EMAIL'                                # gravatar email or image url
name = 'YOUR_NAME'
bio = 'YOUR_BIO'

# misc
disableHLJS = true                                     # disable highlight.js
disablePostNavigation = true                           # disable post navigation
monoDarkIcon = true                                    # show monochrome dark mode icon
gravatarCdn = 'GRAVATAR_CDN_LINK'                      # e.g.
'https://cdn.v2ex.com/gravatar/'
math = true                                            # enable KaTeX math typesetting
globally
localKatex = false                                     # use local KaTeX js/css instead of
CDN
graphCommentId = "YOUR_GRAPH_COMMENT_ID"    # use graph comment (disqus
alternative)
favicon = "/images/favicon.ico"                      # customize the default
favicon
appleTouchIcon = "/images/apple-touch-icon.png"      # customize the default
Apple touch icon

# RTL support
direction = "rtl"                                      # RTL support for Right-to-left
languages

# giscus
[params.giscus]
repo = 'YOUR_GISCUS_REPO'                            # see https://giscus.app for more
details
repoId = 'YOUR_GISCUS_REPO_ID'
category = 'YOUR_GISCUS_CATEGORY'
categoryId = 'YOUR_GISCUS_CATEGORY_ID'
mapping = 'pathname'
theme = 'light'
lang = 'zh-CN'

```

Available options to front matter:

```

comments = false                                     # disable comments for a specific
page
math = true                                         # enable KaTeX math typesetting for
a specific page

```

## Install

As git submodule

Inside the folder of your Hugo project, run:

```
git submodule add https://github.com/nanxiaobei/hugo-paper themes/paper
```

Open `config.toml`(or `hugo.toml`), change `theme` to "paper":

```
theme = "paper"
```

For more information, please read the [official guide of Hugo](#).

## As hugo module

Add paper theme ad dependency of your site:

```
hugo mod init github.com/<your_user>/<your_project>
```

Open `config.toml`(or `hugo.toml`), remove the `theme` line (if present), add `module` section to the bottom of the file:

```
[module]
  [[module.imports]]
    path = "github.com/nanxiaobei/hugo-paper"
```

For more information, please read the [official guide of Hugo](#).
